TCAdvisor and the most Recent Java Update

Java very recently introduced an upgrade, from **version Java SE 8 Update 131 to Java SE 8 Update 141.**
At this time, updating to this most recent version may prevent your ability to access TCAdvisor. At the same time, we are unaware of the impacts of not updating.

There is no impact to Liberty users - please continue to utilize the Liberty functionality and become familiar with the features. *TCA strongly suggests your continuous transition from TCAdvisor to Liberty for reasons such as this outlined. We no longer support the Java upgrades to the TCAdvisor platform.*

As we prepare to retire TCAdvisor in Q3 2017, TCA recently hosted a series of Liberty Training Webinars.
Please click the following link to view a recap of the 6 Liberty Training Webinars:
