

**Did you know...**

## **Liberty Displays the Model Aggregate Time Weighted Return as a Chart or Table**

Did you know Liberty can display the aggregated time weighted return (TWR) for a model portfolio in either a chart or table format? Liberty uses the aggregate method of calculating model-level TWR. The aggregate method combines all the model's assets and external cash flows across all the accounts in the model to calculate returns. These returns can then be displayed for clients in a chart or table format on Liberty.

Please see the [Liberty Model Aggregate TWR Product Overview](#) to learn more about this feature.

If you have any questions about Liberty's Model Aggregate TWR, please contact your relationship manager.
