

Enhanced security option: Two-factor authentication now available on Liberty

On May 18, 2018, TCA by E*TRADE launched a two-factor security option for registered investment advisors. We are now enabling this feature as an option for all representatives and account owners.

Two-factor authentication is a security process which requires users to provide two means of identification before accessing accounts. This feature is an extra layer of security that requires not only a password and a username, but also a unique code generated by an authentication app that is installed on the user's smartphone. Using two-factor authentication makes it more difficult for potential intruders to gain access to, or steal, a client's personal data or identity.

For further details, read more about the two-factor authentication feature in the "Liberty User Guide," "Representative User Guide," and "Liberty Office and Client Management User Guide: Two-Factor Authentication."

Please contact your Relationship Manager with any questions you may have or for a demonstration of the feature.
