

TCAdvisor Requires Upgrade to JAVA 8 (also known as Release Version 1.8)

As a result of system maintenance updates on August 25, this Thursday night, effective August 26, 2016, you must have installed/upgraded to Java 8 in order to run TCAdvisor. If you have not upgraded to Java 8 you will be prompted to do so – ignoring this request to upgrade will result in TCAdvisor failing to launch. There is no impact to Liberty.

If you use Windows, you can see which version of Java you are using by going to the control panel, clicking on Java and then navigating to the Java tab and clicking View to see which versions are currently installed. As long as you have a version installed that is 1.8 or more then they will be ok to run TCAdvisor.

NOTE: Oracle's Marketing name is JAVA 8; the release version is 1.8.

Please contact your relationship manager with questions.
